

ORGAN TRANSPLANT: THE JOURNEY FROM DONATION TO LIFELONG CARE

THE TRANSPLANT PROCESS: STEP BY STEP

TYPES OF ORGAN TRANSPLANT

HEART

End-stage heart disease.

LUNG

Severe lung diseases.

LIVER

Liver failure or damage.

KIDNEY

Kidney failure.

PANCREAS

Diabetes with complications.

INTESTINE

Intestinal failure or short bowel syndrome.

Living donation is possible for kidney, part of liver, lung (lobe), and pancreas.

WHO CAN RECEIVE?

- ✓ Patients with end-stage organ failure not responding to other treatments.
- ✓ Evaluated based on medical condition, age, and suitability.
- ✓ Listed in national transplant registry based on priority.

MATCHING FACTORS

- Blood group compatibility
- HLA (tissue) compatibility
- Organ size
- Medical urgency
- Time on waiting list

BENEFITS OF ORGAN TRANSPLANT

Saves lives and improves survival.

Better quality of life and independence.

Return to daily activities and productivity.

Cost-effective compared to long-term dialysis or other supportive treatments.

CHALLENGES

- ⚠ Shortage of donors and long waiting times
- ⚠ Risk of rejection and infections
- ⚠ Lifelong medication side effects
- ⚠ High cost and access inequality
- ⚠ Emotional and psychological impact

IMMUNE RESPONSE & REJECTION

Normal Immune System

Recognizes Transplanted Organ as Foreign

Immune Attack

Rejection

TYPES OF REJECTION

HYPERACUTE

Occurs within minutes to hours. Rare with current matching.

ACUTE

Occurs days to months. Most common type. Often treatable.

CHRONIC

Occurs months to years. Leads to gradual loss of organ function.

IMMUNOSUPPRESSIVE THERAPY

Medications that reduce immune response and prevent rejection.

Calcineurin Inhibitors
(e.g., Tacrolimus, Cyclosporine)

mTOR Inhibitors
(e.g., Sirolimus, Everolimus)

Antimetabolites
(e.g., Mycophenolate mofetil)

Monoclonal Antibodies
(e.g., Basiliximab)

Corticosteroids
(e.g., Prednisone)

Belatacept
(Co-stimulation blocker)

LIFELONG CARE IS ESSENTIAL

Take medications exactly as prescribed.

Regular follow-up appointments.

Routine blood tests and monitoring.

Healthy diet, exercise and infection prevention.

Avoid smoking and alcohol excess.

SUCCESS BY THE NUMBERS (GLOBAL ESTIMATES)

~150,000+ organ transplants performed worldwide each year

1-year survival rate > 85% for most organ transplants

Kidney transplant can add 10–20 years of life

Each deceased can save up to 8 lives and heal 50+

Thousands more live better, longer lives because of donation

BE AN ORGAN DONOR

One decision can create countless tomorrows.

HOW YOU CAN HELP

Register as an organ donor.

Talk to your family.

Spread awareness about donation.

Support transplant organizations.

Respect and support transplant recipients.

“Organ donation is not just about extending life, it is about enhancing life.”
